Subject: RE: Osmose Presentation for Tomorrow's Technical Meeting
Date: Monday, December 02, 2013 6:09:55 PM

All, I will do the best I can to get you a non-CBI "sanitized" version prior to tomorrow's 11 am. Having said that, we may need to bring hard copies which include all of the CBI data ; collect them when done, and then follow up with an electronic submission. Here is the proposed agenda:

- 1) Description of Micronized Copper Wood Treatment System and production
- 2) Data on particle size distribution for US and non-US products
- 3) Comparative Leaching data for micronized and ACQ/MCQ systems
- 4) Related environmental benefits of micronized vs. older wood treatment systems
- 5) Comparative Acute Toxicity data for micronized vs. ACQ concentrates
- 6) CPSC Surface Dislodgeability Testing Data
- 7) Workplace air monitoring and sawing study data

John Horton of Osmose will present. Seth Goldberg and I will attend. Look forward to seeing many of you tomorrow. Pat

Pat

As we discussed, I've deleted this email with the presentation due to the CBI. I've cc'd the folks above who may attend the meeting tomorrow (although not everyone is available). Please send us all an agenda/purpose and a revised presentation.

Thanks

Jennifer

Jennifer,

The attached presentation is what we intend to cover with staff at tomorrow's meeting. Please distribute to your team.

Thanks,
Pat
